30 August 2022

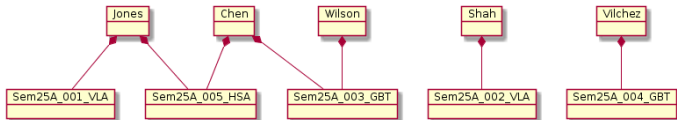

Proposal Vetting—Panel Review Process

- First step after the proposal moves into the “in review” state.
- Vet Proposals.
 - Check proposal is appropriate for the specified Solicitation.
 - Check proposal science category is appropriate.

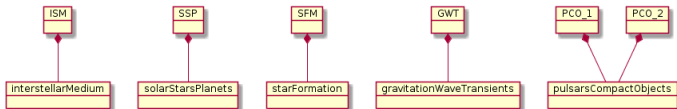

Note—Software should maintain requested and vetted science categories.

Review Configuration—Panel Review Process

- Feasibility Review Configuration. A zero-to-many mapping between feasibility reviewer and Allocation Request (technical justification).

- Science Review Panel Configuration. A many-to-one mapping between SRPs and science category. A two-to-many mapping between science reviewer and Proposal (science justification).

Note—Feasibility reviews have been modified. We now associate reviewers with Allocation Request instead of Feasibility Review Groups (FRGs). We use FRGs as an alias to aid assignment.
