

Image Products Table

This table holds the shared metadata for a set of images which were created together, along with a link to the image products tar file associated with that collection of images.

Note: Once the ancillary products system is implemented, this table will merge with the Images table, and the image products tar will be an ancillary file.

Definition:

Columns:

- image_product_id:** automatically generated unique identifier for the image product
- project_code:** Project to which the image set belongs
- configurations:** Array configuration(s) used for image generation
- collection_name:** Collection to which this image set belongs
- calibration_level:** VO calibration level for the image (defaults to 2)
- product_file_id:** Link to the image products tar file for the image set
- tags:** Tags (not yet implemented) applied to the image set
- image_set_filegroup:** Link to the parent filegroup for the image set (which contains all the images & products)
